

Energy

Our collaborative, problem-solving approach ensures you keep your commitments to your stakeholders and communities.

As a leader in the energy industry, you are accustomed to operating in a complex environment. You need to develop increasingly greener energy, ensure reliable service delivery to your customers, and eliminate financial liabilities. Yet, with constrained funding and regulatory unpredictability, achieving your goals can feel like an uphill battle. And at the end of the day, you're also accountable for protecting your company's reputation.

Haley & Aldrich recognizes that you require an energy consulting partner who asks thoughtful questions and really listens to your needs and the needs of those who may impact your work. Our experienced energy consultants form close relationships with not only our clients, but the stakeholders and regulators who also operate within your ecosystem. This allows us to develop a deep understanding of your big picture goals, challenges, and project drivers – and achieve breakthrough efficiencies so you can focus on what really matters.

Our energy consulting team, which includes leaders in development planning and permitting, environmental remediation, design, and construction, focus on the small, nuanced details of your business. This allows us to develop a custom approach specific to you. As a result, our clients tell us that they appreciate how we often operate as an extension of their own staff.

Market Leader, Energy

Energy consulting to power your business

At Haley & Aldrich, our clients consistently tell us that what also sets us apart is our ability to identify and remove obstacles. And we're able to do so throughout the full lifecycle of the energy ecosystem: from the initial planning and permitting of energy generation and the design of facilities to deliver that energy, through operational and maintenance compliance and efficiency, to the management of environmental liabilities from past contamination and coal combustion residuals.

Our energy consulting markets include:

- [Electric transmission and distribution](#)
- [Manufactured gas plants](#)
- [Nuclear plant decontamination and decommissioning](#)
- [Oil and gas transmission](#)
- [Renewable energy](#)
- [Thermal generation](#)

Whether we are supporting the transformation of power plants, improving grid reliability, or cleaning up the environment to improve the communities you serve, Haley & Aldrich applies in-depth industry expertise and a hands-

on, problem-solving approach that will help to ensure you're reliably delivering services to your customers and maintaining your reputation in the community.
