

Metal foundries, finishing, and recycling

We operate as an extension of your team to help you keep production going and comply with environmental obligations.

Today's metal foundry, finishing, and recycling companies operate in a competitive and challenging industry, often governed by ever-evolving environmental regulations. Complying with these regulations can be daunting, especially if your environmental staff become overwhelmed.

Haley & Aldrich understands that you need a collaborative partner who is not only a trusted advisor but also a strategic thinker who operates as an extension of your staff. Our metal industry team is just that – a group of environmental engineers, scientists, and regulatory experts with decades of hands-on experience across all facets of the metal foundry, finishing, and recycling spaces. In fact, some of our staff members have worked directly in the industry and are intimately familiar with its inner workings.

We deeply understand your constraints and challenges, including your sensitivities regarding community relations. Throughout your operations or specific project, we're at the table with you, regulators, potentially responsible parties, and community stakeholder groups seeking common solutions to move forward.

Market highlights

- Permitting-
- Regulatory compliance and reporting (e.g., TRI and TSCA, including PFAS)-
- Brownfield site redevelopment
- Capital improvement support
- Geotechnical engineering-
- Due diligence
- Facility-specific, risk-based remediation
- Landfill engineering and management
- Organic and inorganic geochemistry assessments
- Stormwater permitting and compliance
- Sustainability and resilience planning

Thinking outside the box to find efficient, high-value solutions

Haley & Aldrich's metal foundry, finishing, and recycling consulting experts seek innovative, technical solutions with a purpose: to reduce costs and provide more value than you expect. We look for solutions that identify new ways to reuse on-site materials, leading to cost savings in operations or innovative risk assessment approaches that decrease the size and scope of legacy issues.

We also recognize that safety is critically important to you, and it's just as important to us. At Haley & Aldrich, we weave health and safety into the fabric of everything we do – in the field, our technical work, and our offices. Each day, we seek to perform work in a way that exceeds the safety expectations of our metals industry clients.

Some of our metals industry consulting services include:

- [Air quality](#)
- [EHS strategy and management](#)

- [Environmental and waste facility construction](#)
- [Environmental due diligence](#)
- [Environmental risk assessment](#)
- [PFAS](#)
- [Remediation](#)
- [Remediation construction](#)
- [Site characterization](#)
- [Stormwater](#)
- [Sustainability](#)

The default approach at Haley & Aldrich is not always the traditional one: We think outside the box and take a hands-on, collaborative approach to guide you through the maze of regulatory compliance and environmental site cleanup, closure, and redevelopment.
