Concurrent treatment of 1,4-dioxane and chlorinated aliphatics in a groundwater recirculation system via aerobic cometabolism

Haley & Aldrich Technical Experts [Min-Ying Jacob Chu](#) and [Peter Bennett](#) have published, along with colleagues at several other organizations, an article in *Groundwater Monitoring & Remediation*. The article, "Concurrent Treatment of [1,4 Dioxane](#) and Chlorinated Aliphatics in a Groundwater Recirculation System via Aerobic Cometabolism," details the team's research demonstrating that it is possible to treat groundwater contaminated by [1,4-dioxane](#) and chlorinated aliphatic co-contaminants by in situ aerobic cometabolic biodegradation.
