

# Strategic decision-making for EHS managers

A collaborative, facilitated approach to understanding and monetizing risks

April 25, 2017

## Publication

## Webinar: strategic decision-making for EHS managers

This webinar was hosted by [NAEM](#) and presented by Haley & Aldrich's Sunila Gupta and Bethany Brooks on April 25, 2017. In it, Gupta and Brooks discuss how new [Lean](#) methods can help environmental, health & safety (EHS) managers to better understand and monetize risk to inform strategic decision-making. Lean is a systematic approach through which an organization can empower its people to identify problems, remove obstacles and implement change. It is based on three principles: respecting people, reducing waste and increasing value. These new approaches focus on how to apply Lean principles to develop:

- A facilitated approach to EHS portfolio management
- A systematic way to assess risk that helps EHS managers make informed and strategic decisions -
- Reporting for internal management and tracking portfolio progress towards goals
