

Decommissioning and demolition

We streamline decommissioning and demolition to lower risks and bring your site to closure.

All power plants, industrial facilities, commercial buildings, and equipment eventually come to an end of their beneficial or economic life. However, decommissioning and demolition of facilities that are no longer operational is a complex, multifaceted undertaking. Ensuring safety is essential, and your project may involve environmental impacts, compliance requirements, or other risks associated with waste management, resource recovery, waste minimization, reclamation, recycling, and disposal. Not to mention, these projects often involve various stakeholders, including community groups and regulators.

Haley & Aldrich's decommissioning and demolition services go beyond standard approaches. We take a full-service, turnkey approach — from project inception through completion. Our teams provide streamlined, single-source execution of complex sites, helping you navigate permitting and approvals, historical considerations, public perception and community relations, risk mitigation, regulatory compliance, air monitoring, waste stream characterization, waste management, regulatory compliance, and more.

Our decommissioning consulting services are built upon a whole-project approach that allows us to find efficiencies, resulting in reduced cost and waste during your decommissioning and demolition projects, facilitating better project control — and enabling us to respond to and manage change more efficiently.-

Our deeply experienced team of decommissioning consultants knows that no two sites are the same. And we keep that top-of-mind during our planning and execution of every decommissioning and demolition project. We work closely with your internal teams and the multiple stakeholders involved in your project, continually looking to uncover the sensitive issues and impacts associated with your site. That way, we can tailor our approach based on your unique decommissioning services needs.-
