

Water quality

We provide the site-specific water quality answers you need – not a one-size-fits-all solution.

Complying with water quality regulations requires consistent management and oversight. You know that the unexpected could lead to fines, environmental liabilities, or bad publicity— and you want your senior management to rest assured that regulatory compliance is under control. When dealing with industrial wastewater discharges under National Pollutant Discharge Elimination System (NPDES) permitting, discharges to municipal sewer treatment works, and oil pollution prevention planning, you simply can't afford compliance-related surprises.

At Haley & Aldrich, our water quality consultants know the key to your success is proactive water quality management planning. The plans we develop with our clients are efficient and effective because we ensure they are site and industry-specific, can be easily integrated with your existing operations, and take near-term facility plans – such as changes in operations and expansions – into consideration.

To develop a custom, proactive approach, our water quality consulting team first assesses your existing facility's plans and policies. We also conduct engineering evaluations to understand the impact of discharge to receiving waters or a downstream treatment plant, and apply our deep understanding of the regulatory framework, including state or local

requirements. This approach can expedite the issuance of permits and provide a framework to assess how changes in your business may impact the ability to consistently meet water quality discharge criteria.

Service highlights

- NPDES permitting
- Spill Prevention, Control, and Countermeasure (SPCC) plan development and integration
- Stormwater Pollution Prevention Plan (SWPPP) and permitting for industrial settings
- Wastewater management and treatment evaluations
- Water quality regulatory compliance

A thoughtful approach to-water quality consulting

Haley & Aldrich's water quality consultants-work to make your compliance programs as thorough and thoughtful as possible. We do this by directly consulting with agencies before permit application or renewal submittals and when you are managing compliance challenges. This allows us to get proactive agency feedback on processes and corrective actions – leading to streamlined agency review times. Our consultants also work directly with your legal counsel to bring technical resources to resolve regulatory compliance matters or violations.

We provide water quality consulting services-to the following markets:
